Introduction to Your Progyny Benefit
Progyny’s Fertility and Family Building Benefit

At Progyny, we know the road to parenthood can be challenging. That’s why we partner with the nation’s leading fertility specialists to bring you a smarter approach with better care, more successful outcomes, and treatment options to support all paths to parenthood. Unlike other fertility solutions, the Progyny benefit has removed barriers to care with no diagnosis requirement or treatment mandates, ensuring equitable and inclusive access for all members.

Your Progyny benefit includes comprehensive treatment coverage leveraging the latest technologies and treatments, personalized emotional support and guidance from dedicated Patient Care Advocates (PCAs), and access to high-quality care through a premier network of fertility specialists.

*Under the Progyny benefits, fertility preservation and donor tissue purchase cost of care will be covered by the Plan. However, this might be considered a taxable benefit to you, for example if your fertility preservation and donor tissue purchase is not provided in connection with treatment for infertility or another medical condition. If so, Yale University employer will include the cost of fertility preservation and donor tissue purchase in your taxable income. If you have questions about fertility preservation and donor tissue purchase benefits available under the Plan, please contact Progyny at (866) 881-4029. If you have questions relating to your federal or state income taxes, we recommend consulting with a tax advisor.

To learn more and activate your benefit, call: 866.881.4029
Personalized Support

Your Care Team

As a Progyny member, your journey will begin with your dedicated Patient Care Advocate (PCA), who will be there to provide clinical and emotional support throughout your entire journey. Progyny PCAs are fertility experts trained to support all paths to parenthood, including surrogacy and adoption. Your PCA can provide guidance on available treatment options and outcomes, coordinate and prepare you for all your appointments, and answer any questions you might have about your benefit. Your PCA is also your connection to a team of Clinical Educators, fertility nurses and embryologists that can answer any clinical questions you may have about your care. If you are interested in exploring other paths to parenthood like surrogacy or adoption, your PCA can also connect you to our specialized Surrogacy and Adoption Coaches. Contact your PCA to learn more or to request outreach from a Clinical Educator, Surrogacy Coach, or Adoption Coach.

Progyny Member Portal

In addition to the personalized support from your PCA, you also have access to the [Progyny member portal] available via the web and as an app (iOS and Android devices). With the member portal, you can view coverage details, review upcoming appointments, view account and claims information, and communicate directly with your PCA, keeping all the information you need in one place. Contact your PCA to login and get started.

Curated Fertility and Family Building Education

We know how confusing the world of fertility can be, and we want to ensure you have access to resources for every step of your family building journey. Visit progyny.com/education to browse articles, videos, infographics, webinars, and the This Is Infertility podcast. Subscribe to Progyny’s YouTube channel for additional fertility education.

Access to High Quality Care

Progyny has created a premier network of fertility specialists, connecting you to high quality specialists across the US. Our network of over 900 fertility specialists across more than 650 clinic locations include nationally recognized providers, many of whom do not contract broadly with national carrier networks. You can search for an in-network fertility specialist, reproductive urologist, and in-network labs at progyny.com/find-a-provider. This search tool includes detailed information for each Progyny network clinic, including provider profiles with demographics, sub-specialties, and other unique practice characteristics.

Our fertility specialists use the latest advancements in science and technology to increase the chances of a healthy and successful pregnancy. With Progyny’s comprehensive benefit design, your doctor is able to work with you to create the customized treatment plan that is best for you.

Our Medical Advisory Board continually evaluates the latest science and research to ensure that your benefit allows your doctor to utilize the best clinical practices and latest technologies, so you receive the highest level of care.
Getting Started

Call Progyny to activate your benefit at 866.881.4029

During your first call your PCA will:

- **Check your eligibility**
  The person(s) receiving treatment must be Faculty and Managerial & Professional staff who are Aetna members or Union staff enrolled in the Aetna Smart Care plan to have access to the Progyny benefit. You may be asked to provide a copy of your insurance card or to complete an attestation form to confirm eligibility.

- **Answer any questions you have** about starting or continuing your family building journey.

- **Help you choose the Progyny in-network provider** that is right for you. If you already have a provider, let your PCA know.

- **Help you to understand your financial responsibility** and what you should expect to pay out-of-pocket.
The Progyny Smart Cycle
Understanding Your Smart Cycle Benefit

To make your fertility benefit easier to use, we’ve bundled all of the individual services, tests, and treatments into the Progyny Smart Cycle. Each treatment or service is valued as a portion of a Smart Cycle and expressed as a fraction, so you always know your benefit balance.

The Progyny Smart Cycle is designed for comprehensive coverage. All standard of care services and technology needed for a treatment cycle are covered within the Smart Cycle. The Smart Cycle authorization includes in-cycle monitoring, anesthesia, assisted hatching, genetic testing, intracytoplasmic sperm injection (ICSI), medications, and even the first year of tissue storage. That means you won’t run out of coverage mid-cycle, and you can focus on the most effective treatment. Please note, covered services include financial responsibility depending on your medical plan and some treatments may have tax considerations. To learn more, visit the Understanding Your Financial Responsibility section or contact your PCA.
Common Ways to Use a Smart Cycle:

Progyny provides inclusive family building benefits to support all paths to parenthood. Progyny Smart Cycles can be mixed and matched to create a customized treatment path that works best for you.

Visit the [Explanation of Covered Treatments & Services](#) section of the Member Guide to learn more. For a full explanation of what’s covered under each Smart Cycle, visit the [Understanding Your Coverage](#) section.
Understanding
Your Coverage
Explanation of Covered Treatments & Services

Progyny offers the following covered services. If a service or procedure is not listed, you should assume that it is not covered by Progyny but may be covered through your medical insurance. Always confirm specific benefits with your dedicated PCA prior to treatment or testing.

Initial Consultation and Diagnostic Testing

Your coverage includes 2 initial consultations per year, until you’ve exhausted your Smart Cycle balance. There is no Smart Cycle deduction for your initial consultations. Depending on your specific circumstances, there may be some tests performed by your provider that are not covered by Progyny. For example, cholesterol, pap smear, HPV, and other tests that are not specific to fertility are not covered under Progyny, but are likely covered under your regular medical insurance. Please be mindful of this before moving forward with specific testing. You can always contact your PCA to clarify if a specific test is covered by Progyny.

Please see the Initial Consultation and Diagnostic Testing appendix for a full list of covered tests and procedures, their CPT codes, and more information.

Covered services are subject to your financial responsibility. See the Understanding Your Financial Responsibility section for more information. Please note, your covered services may be billed across several invoices.

Partial Initial Consultation and Diagnostic Testing

In certain instances, your doctor may recommend a subset of services for your initial consultation and diagnostic testing. To accommodate these instances, Progyny utilizes partial initial consultations and diagnostic testing services.

A few examples include:

- If you seek a second opinion and only have a visit.
- If you have recently completed diagnostic testing, only a visit may be appropriate.
- If you only require partial testing, e.g., a semen analysis or SHG only.

Please note, the examples above are for illustrative purposes only and are not comprehensive. All providers in the Progyny network are instructed to bill for partial services in these circumstances. You may always consult with your PCA to ensure appropriate authorization and billing.

Endometrial Receptivity Cycle / Mock Cycle

A mock cycle occurs when the patient is prescribed medication and monitored as if they were preparing for an embryo transfer. Instead of transferring an embryo, a biopsy of the lining is performed to check the receptivity of the endometrium. Progyny provides coverage for the mock cycle for members with approved medical indications such as a history of previously failed embryo transfers or the use of donor tissue. Your medical necessity for the mock cycle is determined by your provider.
The following services are covered:

- Blood work related to the mock cycle
- Endometrial biopsy
- Endometrial Receptivity pathology at an in-network laboratory
- Office visits
- Ultrasound

Any medications necessary for the mock cycle and listed in the Progyny Rx formulary will be covered. Please see the [Progyny Rx Formulary] section.

**Fertility Treatments Covered Under Your Progyny Benefit:**

**IVF Fresh Cycle = 3/4 Smart Cycle**

An IVF fresh cycle starts by stimulating the ovaries with a course of medications. Following stimulation, the doctor retrieves the eggs, which are taken to the lab and fertilized. After three to five days, an embryo is transferred into the uterus in the hopes of achieving pregnancy. Any remaining embryos may be biopsied for preimplantation genetic testing for aneuploidy (PGT-A) before being frozen using vitrification. PGT-A screens each sample for genetic abnormalities, allowing the fertility specialist to ensure that the most viable embryo is chosen for transfer. Please note, the use of PGT-A does not require a deduction from your Smart Cycle. Any additional, genetically normal embryos remain cryopreserved until needed.

The following procedures are covered:

- Anesthesia (for egg retrieval)
- Assisted hatching
- Blastocyst culture
- Complex sperm wash & prep
- Cycle management
- Embryo biopsy
- Embryo culture lab
- Embryo transfer w/ultrasound guidance
- Intracytoplasmic sperm injection (ICSI)
- Office visits
- Oocyte fertilization/insemination
- Oocyte identification
- Preimplantation genetic testing for aneuploidy (PGT-A)
- Preparation and cryopreservation of extra embryo(s)
- Preparation of embryo(s) for transfer
- Retrieval (follicular aspiration, to include ultrasound guidance)
- Simple sperm wash & prep
- Sperm cryopreservation (sperm storage is billed and authorized separately)
- Tissue storage (1 year)
- Ultrasounds & in-cycle bloodwork (E2, P4, beta hCG, FSH, LH)
IVF Freeze-All = 3/4 Smart Cycle

An IVF freeze-all cycle is similar to an IVF fresh cycle but may increase the chances of success. An IVF freeze-all starts by stimulating the ovaries with a course of medication. Following a course of stimulation medications, the doctor retrieves the eggs, which are taken to the lab and fertilized. The resultant embryos continue to develop until day five when they may be biopsied before being frozen using vitrification. The biopsy of the embryo tissue is sent to a genetic lab for preimplantation genetic testing for aneuploidy (PGT-A). PGT-A screens each sample for genetic abnormalities, allowing the fertility specialist to ensure that the most viable embryo is chosen for transfer. The embryos remain frozen in storage while the PGT-A testing takes place. During this time, the body has an opportunity to return to its pre-treatment state before a frozen embryo transfer is performed at a later date. Please note, a frozen embryo transfer is a separate authorization that requires an additional 1/4 Smart Cycle.

The following procedures are covered:

- Anesthesia (for egg retrieval)
- Assisted hatching
- Blastocyst culture
- Complex sperm wash & prep
- Cycle management
- Embryo biopsy
- Embryo culture lab
- Intracytoplasmic sperm injection (ICSI)
- Office visits
- Oocyte fertilization/insemination
- Oocyte identification
- Preimplantation genetic testing for aneuploidy (PGT-A)
- Preparation and cryopreservation of extra embryo(s)
- Retrieval (follicular aspiration, to include ultrasound guidance)
- Simple sperm wash & prep
- Sperm cryopreservation (sperm storage is billed and authorized separately)
- Tissue storage (1 year)
- Ultrasounds & in-cycle bloodwork (E2, P4, beta hCG, FSH, LH)

Frozen Embryo Transfer (FET) = 1/4 Smart Cycle

Embryos that have been preserved during an IVF freeze-all, frozen oocyte transfer, or previous IVF fresh cycle can be thawed and transferred into the uterus. A frozen embryo transfer is commonly performed following an IVF freeze-all cycle to allow for preimplantation genetic testing for aneuploidy (PGT-A) on the resultant embryos. PGT-A screens each sample for genetic abnormalities, allowing the fertility specialist to ensure that the most viable embryo is chosen for transfer. Please note, FETs performed on a gestational carrier are typically not a covered service. Contact your PCA for more information.

The following procedures are covered:

- Cycle management
- Embryo thaw
- Embryo transfer w/ultrasound guidance
- Office visits
• Preparation of embryo(s) for transfer

• Ultrasounds & in-cycle bloodwork (E2, P4, beta hCG, FSH, LH)

Intrauterine Insemination (IUI) = 1/4 Smart Cycle

Intrauterine insemination (IUI), or artificial insemination, is when after monitoring, sperm is inserted directly into the uterus through a catheter. Sometimes a course of medication is used prior to insemination to stimulate the ovaries and increase the likelihood of pregnancy.

The following procedures are covered:

• Complex sperm wash & prep
• Cycle management
• Insemination
• Office visits

• Simple sperm wash & prep
• Ultrasounds & in-cycle bloodwork (E2, P4, beta hCG, FSH, LH)

Timed Intercourse (TIC) = 1/4 Smart Cycle

Timed intercourse (TIC) may be recommended when irregular or missing ovulation is the cause for infertility. A TIC cycle typically involves monitoring via ultrasound at the clinic and may also involve the use of medication to trigger ovulation. When ovulation is about to occur, the doctor instructs the couple to have timed intercourse at home.

The following procedures are covered:

• Cycle management
• Office visits

• Ultrasounds & in-cycle bloodwork (E2, P4, beta hCG, FSH, LH)

Fertility Preservation (Egg Freezing) = 1/2 Smart Cycle

Egg freezing, or oocyte cryopreservation, allows someone to preserve their fertility as they plan for the future. An egg freezing cycle starts by stimulating the ovaries with a course of medication. Following stimulation, the doctor retrieves eggs from the ovaries and freezes them using vitrification.

The following procedures are covered:

• Anesthesia (for egg retrieval)
• Cycle management
• Oocyte identification
• Office visits
• Preparation and cryopreservation of egg(s)

• Retrieval (follicular aspiration, to include ultrasound guidance)
• Tissue storage (1 year)
• Ultrasounds & in-cycle bloodwork (E2, P4, beta hCG, FSH, LH)
Fertility Preservation (Sperm Freezing) = 1/4 Smart Cycle

Although sperm freezing is less common than egg freezing, there are situations in which a doctor may advise banking sperm. Travel when eggs are retrieved and need to be fertilized, low sperm count necessitating multiple sperm donations prior to fertilization, or other medical conditions (such as chemotherapy) are good reasons to consider sperm freezing.

As with other services, financial responsibility will apply to each production of a sample. If you would prefer to preserve your Smart Cycle balance for treatment, you can always opt to pay for these services out-of-pocket.

The following procedures are covered:

- Office visits
- Semen analysis
- Semen cryopreservation
- Tissue storage (1 year)

Split Cycle = 1/4 Additional Smart Cycle

A split cycle is comprised of splitting the cryopreservation of the tissue between eggs and embryos. A split cycle may only be added to an authorized IVF fresh or IVF freeze-all cycle.

The following procedures are covered:

- Oocyte cryopreservation

Frozen Oocyte Transfer = 1/2 Smart Cycle

A frozen oocyte transfer cycle can be scheduled when a member is ready to use their previously frozen eggs to attempt pregnancy. Eggs are thawed and fertilized in the lab. A fresh embryo transfer takes place three to five days after fertilization. Any remaining embryos may undergo preimplantation genetic testing for aneuploidy (PGT-A) prior to being frozen via vitrification.

The following procedures are covered:

- Assisted hatching
- Blastocyst culture
- Complex sperm wash & prep
- Cycle management
- Embryo biopsy
- Embryo culture lab
- Embryo transfer w/ ultrasound guidance
- Intracytoplasmic sperm injection (ICSI)
- Office visits
- Oocyte fertilization/insemination
- Oocyte identification
- Oocyte thaw
- Preimplantation genetic testing for aneuploidy (PGT-A)
- Preparation and cryopreservation of extra embryo(s)
- Preparation of embryo(s) for transfer
• Simple sperm wash & prep
• Tissue storage (1 year)

• Ultrasounds & in-cycle bloodwork (E2, P4, beta hCG, FSH, LH)

Pre-Transfer Embryology Services = 1/2 Smart Cycle

Progyny’s fertility benefit covers pre-transfer embryology services including diagnostic testing, fertilization, preimplantation genetic testing, and cryopreservation for the intended parent who is a covered member. This cycle includes all the embryology services for the creation of embryos from previously frozen or donor eggs. The services begin once the eggs have been retrieved or thawed. Progyny’s fertility benefit does not cover services on a gestational carrier or surrogate, so the frozen embryo transfer is an out-of-pocket cost.

The following procedures are covered:

• Assisted hatching
• Blastocyst culture
• Complex sperm wash & prep
• Cycle management
• Embryo biopsy
• Embryo culture lab
• Intracytoplasmic sperm injection (ICSI)
• Office visits*
• Oocyte fertilization/insemination
• Oocyte identification
• Preimplantation genetic testing for aneuploidy (PGT-A)
• Preparation and cryopreservation of extra embryo(s)
• Simple sperm wash & prep
• Sperm cryopreservation (sperm storage is billed and authorized separately)
• Tissue storage (1 year)
• Ultrasounds & in-cycle bloodwork (E2, P4, beta hCG, FSH, LH)*

*These services are included for those using their own eggs to create embryos. If you are utilizing donor eggs these services are not included.

Standalone Preimplantation Genetic Testing for Aneuploidy (PGT-A) = 1/4 Smart Cycle

Standalone preimplantation genetic testing for aneuploidy (PGT-A) may be performed outside of a traditional IVF cycle, for example, if embryos have already been created and cryopreserved for future use. PGT-A involves testing a small embryo biopsy for chromosomal abnormalities. It greatly reduces the risk of miscarriage and increases the probability of a successful pregnancy. Euploid embryos (those with the correct number of chromosomes) are preserved and saved for future transfer. There is no limit to the number of embryos covered for testing.

Donor Eggs (Oocyte) Purchase = 1 Smart Cycle

Purchase of one cohort of donor eggs counts for 1 Smart Cycle. A cohort typically includes 6-8 oocytes (eggs). Tissue transportation is also covered. Progyny has in-network egg banks so members can purchase donor eggs directly with no upfront cost. Please visit [progyny.com/labs](http://progyny.com/labs) to search for in-network egg banks. Your coverage also includes
reimbursement if you purchase donor eggs at an out-of-network bank. There are also some administrative fees associated with donor egg purchase that may have an out-of-pocket cost. Contact your PCA for more information.

While your benefit includes donor tissue purchase, it may be considered a taxable benefit. Please contact your PCA to learn more about tax treatment. You should also contact a trusted tax advisor for more information regarding the tax treatment of reimbursements under this fertility program.

Donor Sperm Purchase = 1/4 Smart Cycle
Purchase of up to four vials of donor semen counts for 1/4 Smart Cycle per purchase. Tissue transportation is also covered. Progyny has in-network sperm banks so members can purchase sperm directly without an upfront cost. Please visit [progyny.com/labs](http://progyny.com/labs) to search for in-network sperm banks. Your coverage also includes reimbursement if you purchase donor sperm at another sperm bank. Contact your PCA for more information.

You may also elect to purchase donor sperm without utilizing your Smart Cycle benefit. You would pay out-of-pocket for the donor sperm (purchase or known donor expenses) as well as transportation. This cost would not contribute towards your medical health plan cost share. Contact your PCA for more information.

While your benefit includes donor tissue purchase, it may be considered a taxable benefit. Please contact your PCA to learn more about tax treatment. You should also contact a trusted tax advisor for more information regarding the tax treatment of reimbursements under this fertility program.

FET for Donor Embryo = 1/4 Smart Cycle
Some members may choose embryo donation to build their families. Donor embryo, which is sometimes referred to as embryo adoption, is the process of receiving an embryo created from another individual or couple who have completed their family and donated their remaining embryos. The recipient undergoes a frozen embryo transfer (FET) following testing. The FET is covered as part of the Progyny benefit. Donor embryo typically includes agency/administration fees as well. You may be reimbursed for these fees through your surrogacy financial assistance program. If not, the fees will be an out-of-pocket cost. Please contact your PCA for more information.

The following procedures are covered:

- Cycle management
- Embryo thaw
- Embryo transfer w/ultrasound guidance
- Office visits
- Preparation of embryo(s) for transfer
- Ultrasounds & in-cycle bloodwork (E2, P4, beta hCG, FSH, LH)

Live Donor IVF Fresh = 1.5 Smart Cycles
Live donor IVF fresh refers to egg retrieval services performed on an egg donor. Once the eggs are retrieved, they are fertilized with sperm to create embryos and one embryo is transferred to the uterus. Please note, the fresh embryo transfer (transferring the tissue to the uterus of the intended parent) is covered. Sperm may be either donor tissue or tissue from the intended parent(s). Please note, Progyny’s fertility benefit does not cover services on a gestational carrier or surrogate.
The following procedures are covered for the donor:

- Anesthesia for retrieval
- Cycle management
- Education and instruction for donor
- FDA testing on donor (blood draw and lab tests)
- Follicle puncture for oocyte retrieval
- Office visits

- Physical examination and consultation of donor (includes psychological consultation and testing on donor, physical evaluation on donor—which includes ultrasounds and blood tests, genetic screening, and consultation on donor)
- Retrieval (follicular aspiration, to include ultrasound guidance)
- Ultrasounds & in-cycle bloodwork (E2, P4, beta hCG, FSH, LH)

The following procedures are covered for the recipient:

- Assisted hatching (blast culture)
- Cycle management
- Education and instruction for recipient
- Embryo culture
- Embryo transfer with ultrasound guidance
- Insemination and fertilization of oocytes
- Intracytoplasmic sperm injection (ICSI)
- Office visits
- PGT-A biopsy (PGT-A managed through Progyny in-network lab)
- PGT-M/PGT-SR biopsy (PGT-M/PGT-SR managed through Progyny in-network lab)

- Preparation of embryos for transfer
- Preparation or cryopreservation of embryos, if applicable
- Psychological consultation for recipient
- Semen cryopreservation, if applicable
- Semen thaw, if applicable
- Semen wash and prep (simple or complex preparation)
- Tissue storage (1 year) if balance of embryos remaining
- Ultrasounds & in-cycle bloodwork (E2, P4, beta hCG, FSH, LH)

Non-covered services include (but are not limited to) donor agency fees, donor compensation, and donor medications.

While your benefit includes donor services, it may be considered a taxable benefit. Please contact your PCA to learn more about tax treatment. You should also contact a trusted tax advisor for more information regarding the tax treatment of reimbursements under this fertility program.

**Live Donor IVF Freeze-All = 1 Smart Cycle**

Live donor IVF freeze-all refers to egg retrieval services performed on an egg donor for fertilization and embryo-banking purposes. Sperm may be either donor tissue or tissue from the intended parent(s). Please note, a frozen embryo transfer is a separate authorization that requires an additional 1/4 Smart Cycle.
The following procedures are covered for the donor:

- Anesthesia for retrieval
- Cycle management
- Education and instruction for donor
- FDA testing on donor (blood draw and lab tests)
- Follicle puncture for oocyte retrieval
- Physical examination and consultation of donor (includes psychological consultation and testing on donor, physical evaluation on donor—which includes ultrasounds and blood tests, genetic screening and consultation on donor)
- Office visits
- Retrieval (follicular aspiration, to include ultrasound guidance)
- Ultrasounds & in-cycle bloodwork (E2, P4, beta hCG, FSH, LH)

The following procedures are covered for the recipient:

- Assisted hatching (blast culture)
- Cryopreservation of embryos
- Cycle management
- Education and instruction for recipient
- Embryo culture
- Insemination and fertilization of oocytes
- Intracytoplasmic sperm injection (ICSI)
- Office visits
- Semen cryopreservation, if applicable
- Semen thaw, if applicable
- Semen wash and prep (simple or complex preparation)
- PGT-A biopsy & testing (PGT-A managed through Progyny in-network lab)
- PGT-M/PGT-SR biopsy & testing (PGT-M/PGT-SR managed through Progyny in-network lab)
- Psychological consultation for recipient
- Tissue storage (1 year)
- Ultrasounds & in-cycle bloodwork (E2, P4, beta hCG, FSH, LH)

Non-covered services include (but are not limited to) donor agency fees, donor compensation, and donor medications.

While your benefit includes donor services, it may be considered a taxable benefit. Please contact your PCA to learn more about tax treatment. You should also contact a trusted tax advisor for more information regarding the tax treatment of reimbursements under this fertility program.

**Known/Directed Sperm Donor = 1/2 Smart Cycle**

Some members may choose to utilize a known sperm donor for their family building needs. When utilizing a known or directed donor, specific testing is required. These services deduct 1/2 Smart Cycle and include one year of storage. Sperm donors can visit one of our contracted sperm banks, and your PCA will create an authorization. If donor has to use a different location, you may pay the upfront costs and submit for reimbursement and a Smart Cycle deduction. Speak to your PCA about what out-of-pocket costs may occur (for example the fees associated with a legal agreement, psychological evaluation, and genetic counseling services). Your PCA will also be able to direct you to Progyny in-network labs for testing.
The following procedures are covered:

- Banking attempt(s)
- Office visits
- Physical
- Risk assessment(s)
- Expanded carrier screening
- Screening bloodwork
- Consultation, semen analysis, processing, and freeze
- Tissue storage (1 year)
- Final serology test & donor eligibility determination testing
- Karyotyping (separate authorization)

**Partial Cycle = 1/4 Smart Cycle**

You may be eligible for coverage of a partial cycle if you are pursuing IVF and have only 1/4 Smart Cycle remaining. While 1/4 Smart Cycle is not sufficient to cover a full IVF cycle, the partial cycle authorization provides coverage for all standard covered services up to and including egg retrieval. Any services following the retrieval are not included in this authorization and will remain a full out-of-pocket cost.

The following procedures are covered:

- Abdominal or endoscopic aspiration of eggs from ovaries
- Abdominal ultrasound
- Cycle management
- Office visits
- Oocyte identification from follicular fluid
- Retrieval (follicular aspiration, to include ultrasound guidance)
- Ultrasounds & in-cycle bloodwork (E2, P4, beta hCG, FSH, LH)

Note, if you have 1/2 Smart Cycle remaining, all Embryology services during an IVF cycle may be covered as a partial cycle. Please reach out to your PCA for more information.
Included In Your Coverage

Reproductive Endocrinology Services

Anesthesia for Egg Retrieval

Egg retrievals are typically performed with anesthesia (deep sedation).

Assisted Hatching

In order for the advanced embryo to implant in the uterine wall and to continue development, it must hatch out of its shell, which is called the zona pellucida.

Some embryos grown in the laboratory may have a harder shell than normal or may lack the energy requirements needed to complete the hatching process. Embryologists can help these embryos achieve successful implantation through a technique called assisted hatching.

On the third or fifth day of laboratory growth and shortly prior to uterine transfer, a small hole is made in the zona pellucida of the embryo with a specially fitted laser microscope. Through this opening, the cells of the embryo can escape from the shell and implant at a somewhat earlier time of development, when the uterine lining may be more favorable.

Cryopreservation

Cryopreservation is the process of freezing tissue to sub-zero temperatures for later use. When the tissue is needed, it is thawed and used in a treatment cycle.

D&C

Occasionally, a minor surgical procedure called a D&C is needed in a fertility setting. Typically, this procedure is billed to your medical insurance and is covered. However, if your medical insurance does not cover it, or if your clinic is out of network with your medical insurance, Progyny may cover it (unless the procedure is restricted by any applicable local, state or federal laws, rules or regulations at the time of performance or coverage). Please note, this may be covered as a reimbursement. Reimbursements must be submitted within three months of date of service. Please reach out to your PCA for more details.

Embryo Culture

Embryo culture is a component of in vitro fertilization (IVF) when resultant embryos are allowed to grow for some time in the lab.

FDA Workup

FDA-approved lab testing is required for any member or dependent who is using a gestational carrier or surrogate.
Pertilization

Fertilization refers to the process in which eggs are combined with sperm in the laboratory by adding sperm to the dish containing the egg to create embryos.

Genetic Counseling

Genetic Counseling is sometimes required as part of your fertility journey to review your pre-conception carrier screening or PGT-A/M/SR results. Typically, genetic counseling is covered by your medical insurance. However, if your medical insurance will not cover the service, or if your genetic counselor is out of network with your medical insurance, Progyny will cover it. Please note, this may be covered as a reimbursement. Reimbursements must be submitted within three months of date of service. Please reach out to your PCA for more details.

In-Cycle Monitoring/Management

During a treatment cycle, the clinic will monitor progress through pelvic ultrasounds and blood work every other day. This helps shed light on the development of follicles and the thickness of the endometrium, both of which are essential measures in the stimulation process.

Intracytoplasmic Sperm Injection (ICSI)

Intracytoplasmic sperm injection (ICSI), also known as micro manipulation, is a laboratory technique that is performed in most IVF cases in the United States. Once the eggs are ready for insemination, a micropipette or tiny needle is used to inject a single, normal appearing, living sperm directly into the center of an egg to promote fertilization. ICSI is most often used in cases of male factor infertility such as low sperm count; poor sperm morphology (shape) or motility (movement); or if the sperm have trouble attaching to the egg—however many clinics now perform it in most or all IVF cycles.

Preimplantation Genetic Testing for Aneuploidy (PGT-A)

Preimplantation genetic testing for aneuploidy (PGT-A) may be performed in conjunction with IVF treatment and involves testing a small embryo biopsy for chromosomal abnormalities. Only euploid embryos (those with the correct number of chromosomes) are preserved and saved for future transfer.

PGT-A testing greatly reduces the risk of miscarriage and increases the probability of a successful and healthy pregnancy. Furthermore, a single embryo transfer (SET) is recommended, thus nearly eliminating the risk of a multiple pregnancy.

PGT-A can be performed during any cycle where embryos are created in the lab—frozen oocyte transfer, IVF freeze-all, or IVF fresh cycles (because it can take several days to get the PGT-A test results from the lab, the embryo(s) transferred during an IVF fresh cycle are unlikely to be PGT-A tested). Your Progyny coverage also allows for untested, previously frozen embryos to be thawed, biopsied for PGT-A testing, and frozen again prior to transfer. There is no limit to the number of embryos covered for testing.
Preimplantation Genetic Testing for Monogenic/Single Gene Diseases (PGT-M)

Preimplantation genetic testing for monogenic/single gene diseases (PGT-M) is a procedure used prior to implantation to help identify genetic defects within embryos. This serves to prevent certain genetic diseases or disorders from being passed on to the child.

Preimplantation Genetic Testing for Structural Rearrangements (PGT-SR)

Preimplantation genetic testing for structural rearrangements (PGT-SR) is utilized when one or both intended parents may have a balanced chromosome or structural rearrangement (inversions or translocations). PGT-SR reduces the risk of having a pregnancy or child with an unbalanced structural abnormality, which involves extra or missing genetic material and typically results in pregnancy loss.

Remote/Outside Monitoring

When choosing a clinic, it’s important to select a fertility clinic that will both meet your personal needs and be easily accessible throughout your fertility cycle. Your treatment will include numerous visits to your clinic for a series of testing such as blood work and ultrasounds, called monitoring or morning monitoring. These tests are designed to ensure you are responding to the medication prescribed by your doctor.

All services, including monitoring, are authorized at your primary clinic and typically cannot be covered if performed at outside clinics or labs.

If you should choose to pursue these services at a different clinic than the one that is performing the retrieval or transfer, this is referred to as remote monitoring (or outside monitoring) and it is not covered by your benefit. The cost of those tests will be an out-of-pocket expense to you.

Single Embryo Transfer (SET)

At Progyny, our goal is your goal: healthy pregnancies and healthy babies. Progyny is committed to providing our members with access to the best care to ensure the best outcomes. While we do not mandate care, we require that all physicians in our network follow the American Society for Reproductive Medicine (ASRM) guidelines.

SET or single embryo transfer is the preferred process where one embryo is transferred at a time. Fertility providers, and the specialty as a whole, overwhelmingly prefer SET to reduce the risk of multiple pregnancy and miscarriage. Transferring more than one embryo does not significantly increase pregnancy rates and can increase the chance of poor outcomes including miscarriage, high-risk pregnancy, and pre-term birth.

If your provider recommends multiple embryo transfer, they must attest that their recommendation meets ASRM guidelines and you may move forward with the transfer.

If the recommended multiple embryo transfer does not meet ASRM guidelines, our Medical Advisory Board will review the recommendation including any supporting medical records.

If approved, you may move forward with the transfer as planned.
If the transfer of multiple embryos is denied by Progyny’s Medical Advisory Board, you and your provider should discuss your next steps. If you choose to move forward with SET, your transfer will be covered as normal (assuming eligibility and sufficient benefit remaining). If you and your provider choose to move forward with the transfer of multiple embryos, the transfer will be an out-of-pocket cost that is not covered under your plan.

Please contact your PCA for more information.

**Sperm Wash and Preparation**

Sperm washing is a form of sperm preparation that is required prior to intrauterine insemination or IVF because it removes chemicals from the semen, which may cause adverse reactions in the uterus.

**Telehealth**

A telehealth appointment is a one-on-one video meeting with your provider. Telehealth can be utilized for an initial consultation, for example, enabling you to meet your doctor, discuss your medical history and explore possible treatments, just like you would for an in-person visit. Progyny members have coverage for telehealth within their Smart Cycles. Just like an in-person office visit, financial responsibility for a telehealth visit will be determined by your plan enrollment.

**Tissue Storage**

Storage for tissue retrieved or created using the Progyny benefit is covered for the first year. Additional years of storage will be an out-of-pocket cost to you.

If you already have tissue in storage that was not created or retrieved with the Progyny benefit, Progyny will cover one year of storage in an in-network clinic or storage facility.

**Tissue Transportation**

Tissue transportation within or into an in-network clinic or storage facility is covered by Progyny. Note, reimbursements must be submitted within three months of date of service. Contact your PCA for more information on reimbursement.

**Reproductive Urology (male-factor) Services**

Progyny covers sperm related or male-factor infertility, which typically means there is an issue with sperm production or delivery, motility or the shape of sperm, or blockage in the reproductive tract. While treatment will vary, an individual will typically need to see a reproductive urologist who specializes in male reproductive health. The Progyny benefit provides treatment coverage for these services and access to a curated network of reproductive urologists. These services do not impact your Smart Cycle balance but may have financial responsibility. Contact your PCA for more information.

**Sperm Retrieval Procedures**

Sperm retrieval procedures involve procuring sperm for storage or use in fertility treatment. These include:
Testicular Sperm Aspiration (TESA) is a procedure often performed for obstructive azoospermia and involves the insertion of a needle into the testicle and tissue/sperm are aspirated. All of the following services are covered for a TESA:

- Office Visits
- Scrotal Ultrasound
- Rectal Ultrasound
- Biopsy of the Testis, Needle
- Sperm Aspiration
- Sperm Identification from Testis Tissue

Cytopathology: Evaluation of Fine Needle Aspirate
Cytopathology: Fluids, Washings, or Brushings
Cytopathology: Concentration Technique
Level IV Surgical Pathology
Facility Fees and Anesthesia

Percutaneous Epididymal Sperm Aspiration (PESA) is a procedure often performed for obstructive azoospermia from either a prior vasectomy or infection. All of the following services are covered for a PESA:

- Office Visits
- Scrotal Ultrasound
- Rectal Ultrasound
- Biopsy of the Testis, Needle
- Sperm Aspiration
- Sperm Identification from Epididymal or Vasal Fluid

Cytopathology: Evaluation of Fine Needle Aspirate
Cytopathology: Fluids, Washings, or Brushings
Cytopathology: Concentration Technique
Level IV Surgical Pathology
Facility Fees and Anesthesia

Testicular Sperm Extraction (TESE) or Microdissection TESE (MicroTESE) is a procedure often performed when there is a sperm production problem and there are few or no sperm present in the ejaculate. A small incision is made in the testis to examine the tubules for the presence of sperm.

All of the following services are covered for a TESE:

- Office Visits
- Scrotal Ultrasound
- Rectal Ultrasound
- Biopsy of the Testis, Incisional
- Sperm Identification from Testis Tissue

Cytopathology: Fluids, Washings, or Brushings
Cytopathology: Concentration Technique
Level IV Surgical Pathology
Facility Fees and Anesthesia

All of the following services are covered for a Micro TESE:

- Office Visits
- Scrotal Ultrasound
- Rectal Ultrasound
- Biopsy of the Testis, Incisional
• Sperm Identification from Testis Tissue
• Cytopathology: Fluids, Washings, or Brushings
• Level IV Surgical Pathology
• Cytopathology: Concentration Technique
• Facility Fees and Anesthesia

Microepididymal Sperm Aspiration (MESA) is a procedure often performed for vasal or epididymal obstruction and allows for an extensive collection of mature sperm. All of the following services are covered for a MESA:

• Office Visits
• Scrotal Ultrasound
• Rectal Ultrasound
• Biopsy of the Testis, Needle
• Biopsy of the Testis, Incisional
• Sperm Aspiration
• Sperm Identification from Epididymal or Vasal Fluid
• Cytopathology: Evaluation of Fine Needle Aspirate
• Cytopathology: Fluids, Washings, or Brushings
• Cytopathology: Concentration Technique
• Level IV Surgical Pathology
• Facility Fees and Anesthesia

Percutaneous Vasal Sperm Aspiration / Vasal Sperm Aspiration (PVSA / VASA)

All of the following services are covered for a PVSA/VASA:

• Office Visits
• Scrotal Ultrasound
• Rectal Ultrasound
• Biopsy of the Testis, Needle
• Sperm Aspiration
• Sperm Identification from Epididymal or Vasal Fluid
• Cytopathology: Evaluation of Fine Needle Aspirate
• Cytopathology: Fluids, Washings, or Brushings
• Cytopathology: Concentration Technique
• Level IV Surgical Pathology
• Facility Fees and Anesthesia

Other Reproductive Urology (male-factor) Treatments

In addition to sperm retrieval procedures, Progyny also covers several other treatments for male-factor infertility. These include:

• Fine Needle Aspiration Biopsy (Testes Mapping)
• Electroejaculation (rectal probe) or Penile Vibratory Stimulation (PVS)
• Varicocelectomy (unilateral + Bilateral)
• Cystoscopy and Transrectal ultrasound-guided seminal vesicle aspiration and chromotubation
- Transurethral resection of the ejaculatory ducts (TURED)
- Cytopathology: Evaluation of fine needle aspirate
- Cytopathology: Fluids, washings or brushings
- Sperm DNA Fragmentation
- Cytopathology: Concentration technique
- Level IV Surgical Pathology
- Vasography
- Orchidopexy
- Inguinal Exploration
- Scrotal Exploration and microsurgical reconstruction for idiopathic or defined excurrent duct obstruction

Please see the [Initial Consultation and Diagnostic Testing for Reproductive Urology (male-factor)](#) appendix for a full list of covered tests and procedures and their CPT codes.
Fertility Medications

Fertility medications are essential to your treatment. Your medication is covered under Progyny Rx, which is designed to work seamlessly with your treatment coverage. There is only one authorization process, so your treatment and your medication will be authorized at the same time. Progyny partners with leading mail order specialty fertility pharmacies to bring you clinical support and overnight delivery of your medications. An UnPack It Call and concierge support is included with every medication delivery and you have access to a pharmacy clinician for any questions you may have, 7 days a week.

Here’s How It Works:

Once your prescription has been received from your provider, you will receive a call from a Progyny Rx pharmacist to schedule your medication delivery.

Inside your order you will find a Progyny Rx placemat that depicts the medication and equipment included in your order and how to properly store them. All medications, compounds, ancillary medications, and equipment required for treatment will be included in your shipment. The placemat includes the phone number for the Progyny Rx pharmacy who will conduct your UnPack It Call. Your Progyny Rx UnPack It Call connects you to a trained pharmacy clinician who will walk you through your order, explain how to store and administer each medication, and answer any additional questions you may have. Additionally, you can view Progyny Rx video tutorials on medication administration at progyny.com/rx.

The Progyny Rx pharmacy will ensure only the necessary amount of medication is dispensed to prevent possible unused medications, which can be costly to you. Medications are sent using next day delivery (or same day, if necessary) to ensure they arrive for your treatment. The Progyny Rx pharmacy will contact you throughout your treatment for additional medication deliveries that may be required.

If you have any questions relating to your medication, the Progyny Rx pharmacy is available 7 days a week by calling the number noted in your medication delivery.

Please reference the Progyny Rx Formulary section of the Member Guide for a list of covered medications.

Note: Medication covered under Progyny Rx is subject to your financial responsibility as determined by your medical plan. Any ancillary medications fall under your medical plan and may require a copayment over the phone via credit card. Please see the Understanding Your Financial Responsibility section for more information about how your out-of-pocket costs are determined.
Surrogacy Financial Assistance Program

What's Included in My Surrogacy Benefit?

Whether you're just starting to think about surrogacy, have already reached out to a few agencies, or have already met your surrogate, your dedicated PCA can provide surrogacy counseling about next steps, including:

- Details on the process and average cost of surrogacy
- Explanation of various processes and pathways
- Resources to find legal advice for state-specific laws that impact your options
- Specific counseling for same-sex and transgender couples

Surrogacy Assistance

As part of your Progyny benefit, Yale University provides $10,000 per lifetime to cover surrogacy-related expenses. Intended parents who are covered members also have unlimited access to support from a PCA. Your Smart Cycle covers pre-transfer embryology services, including diagnostic testing, fertilization, and embryo monitoring. Please note, your Smart Cycle allowance cannot be used for the surrogate, as they are not a claimed dependent.
Eligible surrogacy expenses include:

- Surrogacy agency or legal fees
  - Attorney fees for both intended parents and surrogate
  - Psych screening and home visit fees for surrogate
  - Psych screening and home visit fees for intended parent(s)
  - Court fees
  - Surrogate compensation
  - Surrogate escrow funds
  - Fees associated with the adoption of a child through a legally recognized surrogate arrangement

- IVF and medical costs related to surrogacy
  - Surrogate screening costs
  - Embryo(s) transfer costs

- Medical expenses related to a surrogate’s pregnancy (which may include but are not limited to: surrogate’s maternity insurance, surrogate’s deductible, surrogate’s co-insurance)

- Travel expenses for the intended parents or surrogate related to the surrogacy

- Consultant/specialist fees

**How Do I Submit My Reimbursement?**

Your surrogacy program is administered by Progyny. When you’re ready to get started, please reach out to your dedicated PCA, who will help facilitate reimbursement. You will simply submit a copy of the agency or legal agreement, as well as any invoices with their corresponding proof-of-payment for eligible expenses. Once your request has been reviewed and processed, Progyny will alert your Payroll department of the amount you should receive. You will see your reimbursement on your paycheck two to three pay cycles after Progyny submits the information.

All benefits provided under this program are subject to applicable federal and state tax withholdings. For purposes of determining when the $10,000 maximum lifetime benefit has been reached, the gross amount of the expense paid or reimbursed is used rather than the net amount after tax withholdings.

For more information on your Surrogacy Financial Assistance Program, including eligibility requirements, please reach out to your PCA or refer to your policy.
Non-Covered Services

Services not listed in the Member Guide are not covered. There are some services that are not covered by Progyny; however, they may be covered by your medical plan (e.g., some corrective surgeries like laparoscopies and myomectomies). Costs will otherwise be your responsibility. Please check with your medical plan to confirm coverage and ensure your fertility doctor is in-network with your medical insurance.

ERISA Process

Progyny Claims and Appeals Procedures

Per the U.S Department of Labor, federal law requires that each welfare plan (i.e., medical plan) subject to Employee Retirement Income Security Act of 1974 (“ERISA”) must set up reasonable rules for filing a claim for benefits. The following procedures apply to the fertility benefit offered through Progyny for the self-insured employee benefits plan offered by your employer, which throughout this document will be referred to as the Plan. Progyny is not the Plan fiduciary or manager; however, Progyny shall comply with and assist the Plan in administering Plan’s claims/appeal processes such that Plan may fulfill its ERISA obligations. Progyny does not have discretionary authority under ERISA and shall defer to and comply with all Plan policies and procedures.

The description of the benefits in your benefits booklet includes specific explanations of each benefit. This policy and procedure describes the general rules and procedures, as well as your rights under ERISA, that relate to filing an appeal for the denial of fertility claims under your Plan. It also describes the procedure for you to follow if your appeal is denied and you wish to appeal the decision through an independent review organization. This document and the procedures it describes are provided in accordance with ERISA requirements and pertain only to the fertility benefits under your Plan.

Under U.S. Department of Labor (DOL) regulations, you are entitled to full and fair review of any claim for benefits made under the Plan. The procedures described here are intended to comply with DOL regulations and these procedures describe how benefit claims and appeals are made and decided.

Authorized Representative

If needed, you can designate an authorized representative to act on your behalf with respect to a benefit claim or appeal under these claims procedures. You must submit a signed Plan-approved form designating your authorized representative before Progyny will recognize your authorized representative. You can obtain an authorized representative form from Progyny. All completed forms must be submitted to:

Progyny 1359 Broadway, 2nd floor, New York, NY 10018
Email: legalnotices@progyny.com
Phone: 877.762.5012
As part of your benefit, you may be eligible for medical reimbursement benefits. This will be paid directly to you, as the ERISA participant, and not to your provider. The Plan Administrator and its delegates have a fiduciary duty only to you and your covered dependents.

Types of Group Health Claims

For all ERISA plans, the law allows a reasonable amount of time for the plan administrator to evaluate a claim and decide whether to pay benefits. Under the ERISA Claims and Appeals rules, these times are dictated by the type of claim and whether you followed the proper procedures, as described below. The claims procedures will vary depending on whether your claim is for a Pre-Service Claim, an Urgent Care Claim, or a Post-Service Claim. All claims for fertility benefits under Progyny will be post-service claims.

Pre-Service Claims

A claim that requires receipt of the benefit, in whole or in part, upon approval before obtaining the medical care. This does not apply to urgent care.

Urgent Care Claim

An urgent care claim is a special type of pre-service claim. An urgent care claim is a pre-service claim for medical care or treatment that could seriously jeopardize your life or health or ability to regain maximum function or would – in the opinion of a physician with knowledge of your medical condition – subject you to severe pain that could not be adequately managed without the care or treatment.

Post-Service Claim

A post-service claim is a claim for a benefit under the Plan that is not a pre-service claim or an urgent care claim. All claims for fertility benefits under Progyny will be post-service claims.

All ERISA claims must be submitted within one year of incurring the service.

All claims may be sent to:

Progyny 1359 Broadway, 2nd floor, New York, NY 10018
Email: legalnotices@progyny.com
Phone: 877.762.5012

Your Plan does not require prior authorization to use your fertility benefits. For this reason, the urgent and pre-service claims are not addressed in the chart below. All decisions regarding your fertility treatments will be made by you in consultation with your doctor. Progyny does not make medical necessity determinations, and Progyny will not deny your initial claim or your appeal on the basis of medical necessity or medical appropriateness. Progyny will process your claim after the services are rendered.

Progyny Member Guide
Prepared for Yale University
Your Right to Appeal a Decision

- You have a right to appeal an adverse decision under these claims procedures.
- You have the right to submit documents, written comments, or other information in support of your appeal.
- You may request reasonable access to, and copies of all documents, records, and other information relevant to your claim for benefits, including (to the extent applicable) the names of any experts consulted in an explanation of the scientific or clinical judgment that serves as the basis for the determination. This information is free of charge.

A claim appeal is treated as received by Progyny:

- On the date it is hand-delivered to the claim address; or
- On the date that it is deposited in the U.S. Mail for first-class delivery in a properly stamped envelope containing name and claim address. The postmark on any such envelope will be proof of the date of mailing.

How Your Appeal Will Be Decided

If your initial claim is denied and you submit an appeal, it will be reviewed and decided by an individual designated by Progyny. That individual will be a different individual than the person who made the initial benefit decision, and they will not be a subordinate of the person who made the initial benefit decision.
Progyny will take into account all information you have submitted, even if it was not presented or available at the initial benefit decision. During your appeal, the Plan will not defer to the initial benefit decision.

Before Progyny or your plan issues any new determinations, we will provide you with the rationale along with any additional evidence. This is provided free of charge and sufficiently in advance of our final determination to give you an opportunity to respond.

Neither Progyny nor your Plan will retaliate or take any discriminatory action against you if you decide to file an appeal. We will continue to treat you fairly and your appeal will not affect any other part of your health coverage.

Notification of Initial Decision and Appeal Benefit Decision by Plan

You will receive written notice of the decision, as applicable, on your post-service claim. For initial decisions, you will only receive notice if your claim is denied. For appeals, you will receive notice of either a denial or approval.

Notification of Benefit Decision

If your claim or appeal is denied you will receive notice of that denial and it will include:

- Information sufficient to identify the claim (including the date of service, the health care provider, the claim amount);
- Reference(s) to the specific Plan provision(s) on which the decision is based;
- A description of any additional material or information necessary to adjust the claim and why such information is necessary;
- A description of procedures and time limits for appeal of the decision, and the right to obtain information about those procedures, and the right to sue in federal court;
- A statement disclosing any internal rule, guidelines, protocol or similar criterion relied on in making the adverse decision (or a statement that such information will be provided free of charge upon request), and an explanation of the scientific or clinical judgement for the determination to the extent applicable (or a statement that such information will be provided free of charge upon request);
- A statement describing the reason or reasons for the adverse determination including the denial code, and its corresponding meaning and description of the standard used to deny the claim to the extent applicable;
- A statement describing the availability of the diagnosis and treatment codes, with their corresponding meanings, upon request;
- A statement indicating entitlement to receive on request, and without charge, reasonable access to or copies of all documents, records or other information relevant to the determination;
- A statement describing the availability of assistance through the office of health insurance consumer assistance.

For appeals, you will also receive notice if your appeal is approved.
If your claim is denied in whole or in part, and you decide to file suit in federal court, you must file suit within 180 days of the date of the letter denying your appeal.

External Claims Procedures

- External review of denied claims is available under these procedures if the denial was based on: A rescission or cancellation of coverage (rescission is when benefits are retroactively terminated by the Plan).
- Any other legally qualifying reason.

Independent Review Organization (IRO)

Members can choose to utilize an Independent Review Organization to review their claim.

Progyny will engage an independent review organization (IRO) that is accredited by the Utilization Review Accreditation Commission (URAC) or by a similar nationally recognized accrediting organization, to conduct any external reviews under these claim procedures. Progyny will take actions to guard against bias in favor of denial of external review claims and to ensure independence.

- If the IRO reverses the decision of Progyny, your payments or coverage must begin immediately, even if Progyny expects to appeal it to a court of law.
- The contracts with the IROs must include the requirements contained in the DOL (Department of Labor) Technical Releases, and the IROs must agree, among other things, to the following: de novo review, meaning without reference to a previously made decision, of all information and documents timely received (including Progyny documents, claims records, health care professional recommendations, and clinical review criteria used, if any), retaining its records for six years and making them available to the applicable claimant (or to State and Federal government agencies, to the extent not in violation of any privacy laws) for examination upon request, and inclusion of certain information in notices to claimants.

Progyny intends and is taking steps in good faith to comply with the claims and appeals rules under ERISA and the Affordable Care Act and these provisions should be interpreted accordingly.
More About the IRO Review

Progyny will rotate external claim assignments among various IROs (or incorporate other independent, unbiased methods for selection of IROs, such as random selection). Any IRO will not be eligible for any financial incentives based on the likelihood that the IRO will support the denial of benefits.

If one of the below conditions is met, you may request an external review of adverse benefit determinations based upon any of the following:

- Rescission of coverage (coverage that was cancelled or discontinued retroactively);
- or
- As otherwise required by applicable law.

You or your representative may request a standard external review by sending a written request to the address set out in the determination letter. A request must be made within four months after the date you received Progyny’s decision.

An external review request should include all of the following:

- A specific request for an external review;
- The Covered Person’s name, address, and insurance ID number;
- Your designated representative’s name and address, when applicable;
- The service that was denied; and
- Any new, relevant information that was not provided during the internal appeal.

Standard External Review

A standard external review is comprised of all of the following:

- A preliminary review by Progyny of the request;
- A referral of the request by Progyny to the IRO; and
- A decision by the IRO.

Within the applicable timeframe after receipt of the request, Progyny will complete a preliminary review to determine whether the individual for whom the request was submitted meets all of the following:

- Is or was covered under the Plan at the time the health care service or procedure that is at issue in the request was provided;
- Has exhausted the applicable internal appeals process; and
- Has provided all the information and forms required so that Progyny may process the request.

After Progyny completes the preliminary review, Progyny will issue a notification in writing to you. If the request is eligible for external review, Progyny will assign an IRO to conduct such review. Progyny will assign requests by either rotating claims assignments among the IROs or by using a random selection process.
The IRO will notify you in writing of the request’s eligibility and acceptance for external review. You may submit in writing to the IRO within ten business days following the date of receipt of the notice additional information that the IRO will consider when conducting the external review. The IRO is not required to, but may, accept and consider additional information submitted by you after ten business days.

Progyny will provide to the assigned IRO the documents and information considered in making Progyny’s initial determination. The documents include:

- All relevant medical records;
- All other documents relied upon by Progyny; and
- All other information or evidence that you or your Physician submitted. If there is any information or evidence you or your Physician wish to submit that was not previously provided, you may include this information with your external review request and Progyny will include it with the documents forwarded to the IRO.

In reaching a decision, the IRO will review the claim anew and not be bound by any decisions or conclusions reached by Progyny. The IRO will provide written notice of its determination (the “Final External Review Decision”) within 45 days after it receives the request for the external review (unless they request additional time and you agree). The IRO will deliver the notice of Final External Review Decision to you and Progyny, and it will include the basis for the determination.

Upon receipt of a Final External Review Decision reversing Progyny determination, Progyny will immediately provide coverage or payment for the benefit claim at issue in accordance with the terms and conditions of the Plan benefit plan, and any applicable law regarding plan remedies.

If the Final External Review Decision is that payment or referral will not be made, Progyny will not be obligated to provide for the health care service or procedure.

**Limitation on When a Lawsuit May be Started**

You may not start a lawsuit related to a Claim until you have requested an appeal and a final decision has been rendered, or until all applicable time frames have elapsed since you filed your request for appeal and you have not received a final decision or notice of extension. You may also pursue remedies under ERISA section 502(a) without exhausting these appeals procedures if we have failed to follow them. No lawsuit may be started more than three (3) years after the end of the year in which the services were provided.

If you have questions about these appeals processes, contact us at 877.762.5012. If you have a hearing or speech impairment, or need a language interpreter, we will provide you with a verbal interpretation or an alternate format at no charge to you.

If you need assistance filing either an external appeal or internal appeal, you may contact Progyny at 877.762.5012.
Authorization & Financial Responsibility
Authorization/Patient Confirmation Statement

What Is a Patient Confirmation Statement (Authorization) and Why Do I Need It?

A Patient Confirmation Statement (authorization) is a document that confirms your Progyny coverage for a specific treatment. The best way to prevent errors or delays in treatment is to request an authorization before your first appointment and again before you begin each treatment cycle. Progyny sends an authorization to your clinic confirming coverage for your treatment, which helps to ensure an error-free billing process.

Contact your dedicated PCA when you schedule an initial consultation or treatment cycle so that an authorization is generated prior to your appointment. Your PCA will obtain the authorization, providing you with a seamless experience. Obtaining an authorization prior to treatment ensures that you are eligible for services and that you understand the treatment plan indicated by your doctor. Once your authorization is complete, you will receive a Patient Confirmation Statement. The Patient Confirmation Statement works in place of a Progyny ID card and includes your Progyny member ID number, the dates that your authorization is valid, and the procedure codes to be used by the clinic. Although your clinic will receive a copy of your statement automatically, we recommend printing a copy and bringing it with you to your appointment to make sure your clinic has the correct information listed in your account.

During your initial consultation you may be asked to get blood work done at a lab outside of the clinic where you are receiving treatment. A list of in-network laboratory partners can be found at progyny.com/labs. Please bring a copy of your Patient Confirmation Statement with you as it has all the necessary information for the lab to bill Progyny. Please note, this is the ONLY time blood work performed outside of your clinic will be covered by Progyny. Once treatment begins, all lab draws must take place at your clinic.

If you choose to pursue preimplantation genetic testing on your embryos, share a copy of your Patient Confirmation Statement with the genetic lab performing the testing so that they bill Progyny directly. On this statement you will find the list of in-network reference labs, preconception carrier screening labs, and preimplantation genetic testing labs for this genetic testing, as well as contact information for your specialty pharmacy.

Authorizations for initial consultations are valid for 90 days. Authorizations for treatment are valid for 60 days. The authorization alone is not a guarantee of coverage. You must also be active on an eligible medical plan on the date of service reported by your fertility provider, and this date of service must be within the valid date range of your authorization for coverage to apply.
Understanding Your Financial Responsibility

Why Am I Getting a Bill from Progyny?

Progyny works in conjunction with your medical plan to administer your Progyny fertility benefit. As a result, your member financial responsibility—which may include deductible, coinsurance, copayment, and/or out-of-pocket maximum, depending on your medical plan—cross accumulates and is applied to your fertility treatment in the same way a surgery or treatment for a broken bone would be.

Insurance Terminology

Insurance terminology can be confusing, so here’s the best way to think about it:

- Your **premium** is the amount deducted from your pay for your medical coverage. There is no additional premium through Progyny.

- At the start of each plan year, you will pay out-of-pocket for all medical services (including fertility services) until you reach your **deductible**.

- You and your medical plan both pay a percentage of your **covered** healthcare services, once you’ve reached your deductible. This is called **coinsurance**.

- You are/may also be responsible for a **copayment**, which is a flat fee for certain services or prescriptions, determined by your medical plan.

- You and your medical plan continue to split the costs of your covered healthcare services until you reach your **out-of-pocket maximum**.

- Then, 100% of the costs of your covered Progyny services will be paid for the rest of the plan year.

During your fertility treatment, you must list Progyny as your medical plan in order to avoid significant billing issues and financial responsibility on your part. Your clinic will submit a claim directly to Progyny for payment. Progyny, in turn, submits the claim to your medical plan to be processed and your financial responsibility is applied as applicable. You will receive an invoice from Progyny reflecting this amount. When you receive your Progyny invoice, you can submit payment by mailing a check to the address on your invoice, by credit card, over the phone, via the member portal, or at progyny.com/payment.

Timely Filing

Timely filing is the timeframe within which a claim must be submitted to your insurance carrier. Your timely filing limit is determined by your carrier and will be based on the date of service rendered. The date of service is determined by the clinic.

Progyny will be unable to authorize a service, reimburse for covered services, or submit a claim for processing that is past the timely filing date. If a claim is submitted for processing after the specified timely filing date, the claim will be denied by your carrier. This pertains to any service that requires a claim to be processed, including reimbursements.
Contact your PCA if you have any questions regarding your carrier's timely filing limit.

Note: You should never receive an invoice from the clinic or pay the clinic directly for services covered by Progyny. You should only receive an invoice from Progyny once the treatment is complete and the claim has been processed to determine your financial responsibility. If you are asked to pay at the clinic or receive an invoice from the clinic, please contact your PCA.
Your Benefit

1. What family building options are available through Progyny?

Progyny understands that there are many ways to grow a family. We’re here to support you—however you choose to grow your family. Under your Progyny benefit, a Smart Cycle can be mixed and matched to cover the fertility treatment that is right for you. You may pursue timed intercourse (TIC), intrauterine insemination (IUI), in vitro fertilization (IVF), fertility preservation, or any combination that you and your doctor think is best. Your dedicated PCA can offer support and education for surrogacy and adoption as well.

2. What does Progyny cover?

Under a Smart Cycle, Progyny covers standard of care fertility treatment, including timed intercourse (TIC), intrauterine insemination (IUI), frozen oocyte transfer (FOT), IVF freeze-all, frozen embryo transfer (FET), and IVF fresh. Please note all treatment cycles have a Smart Cycle deduction. Initial consultation and some stand-alone services, such as preimplantation genetic testing for aneuploidy (PGT-A), sperm retrieval procedures, and reproductive urology (male-factor) treatments are also covered. For a more detailed review of your plan coverage options, please refer to the Explanation of Covered Treatments & Services section of your Member Guide. You can also learn about different types of treatments directly from reproductive endocrinologists in the Progyny network by visiting progyny.com/education. Please note, covered services include financial responsibility depending on your medical plan. To learn more, visit the Understanding Your Financial Responsibility section.

3. Is Progyny’s benefit inclusive of all unique paths to parenthood?

Yes, Progyny’s family building benefit was specifically designed to support everyone, including single parents by choice and LGBTQ+ individuals and couples. Please contact your PCA to learn more about your family building options.

4. How do I know how many Smart Cycles I have left and how I can use them?

Please contact your dedicated PCA for more information regarding your Smart Cycle balance and to discuss your options for utilizing your benefit. You can also view your Smart Cycle balance in your member portal.

5. What’s covered in my initial consultation and diagnostic testing bundle?

Your initial consultation and diagnostic testing bundle includes, but is not limited to: three office visits, two ultrasounds, hormone testing, infectious disease testing, and two semen analyses. For a detailed list of coverage, please refer to the Explanation of Covered Treatments & Services section of your Member Guide.

The initial consultation and diagnostic bundle is designed to provide you access to all standard of care services necessary to provide you and your doctor with all of the diagnostic information you need.
6. What if I don’t need the full initial consultation and diagnostic workup?
In certain instances, your doctor may recommend a portion of the services included in the initial consultation bundle. For example, you may be seeking a second opinion, or you may have recently completed diagnostic testing. To accommodate these instances, Progyny has created partial initial consult and diagnostic testing services. All providers in the Progyny network are instructed to bill for partial services in these circumstances. You may always speak to your PCA to ensure appropriate authorization and billing.

7. What’s covered under my Smart Cycle authorizations?
Each treatment authorization is valid for 60 days and covers your baseline blood test, ultrasound and monitoring appointments. Anesthesia for egg retrieval, fertilization (including intracytoplasmic sperm injection (ICSI)), assisted hatching, preimplantation genetic testing for aneuploidy (PGT-A), cryopreservation, and embryo transfer are also covered, where applicable. To learn more about what is included in each treatment cycle, please refer to the Explanation of Covered Treatments & Services section of your Member Guide.

8. What is ICSI and is it covered?
Intracytoplasmic sperm injection (ICSI) is a procedure that uses a micropipette or a tiny needle to inject a single sperm into an egg to facilitate fertilization. ICSI is covered as part of your Smart Cycle. As with all covered services, you should expect a bill for your financial responsibility. Please note, ICSI may be billed separately.

9. What is PGT-A and is it covered?
Preimplantation genetic testing for aneuploidy (PGT-A), also called CCS and NGS, is a test performed on embryo biopsy tissue to test each embryo for chromosomal abnormalities in conjunction with IVF. All embryos from an IVF freeze-all and any resultant embryos remaining from the frozen oocyte transfer and IVF fresh cycles are eligible for PGT-A testing. PGT-A is also available for embryos that were frozen prior to the commencement of your Progyny coverage. This testing is a covered service included as part of a Smart Cycle and will not affect your balance; however, if performed as a standalone service 1/4 Smart Cycle will be deducted. As with all covered services, you should expect a bill for your financial responsibility. Please note, PGT-A may be billed separately.

10. What is PGT-M and is it covered?
Preimplantation genetic testing for monogenic/single gene disease (PGT-M) is a test that is performed on an embryo biopsy at the same time as preimplantation genetic testing for aneuploidy (PGT-A). PGT-M tests for specific single gene mutations and is used if you carry a genetic mutation, such as cystic fibrosis, Tay-Sachs, or Huntington’s disease. This is a covered standalone service under your benefit and will not impact your Smart Cycle balance.

11. What is PGT-SR and is it covered?
Preimplantation genetic testing for structural rearrangements (PGT-SR) is utilized when one or both intended parents may have a balanced chromosome or structural rearrangement (inversions or translocations). PGT-SR reduces the risk of having a pregnancy or child with an unbalanced structural abnormality, which involves extra
or missing genetic material and typically results in pregnancy loss. This is a covered standalone service under your benefit and will not impact your Smart Cycle balance.

12. **What if my authorized IVF freeze-all or IVF fresh cycle is converted into a timed intercourse cycle (TIC)?**

If your IVF freeze-all or IVF fresh treatment cycle is converted into a TIC by your provider, please contact your PCA immediately so that a new authorization can be issued. This change will impact your Smart Cycle balance and out-of-pocket financial responsibility. If your treatment is converted into a TIC and you do not want this service to impact your Smart Cycle balance, you have the option to pay for the service out-of-pocket. However, you will need to notify your PCA of this decision prior to the completion of your treatment. Progyny is unable to cancel authorizations once a claim from the clinic has been received.

13. **What if my authorized IVF fresh cycle is converted into an IVF freeze-all cycle?**

If your IVF fresh cycle is converted into an IVF freeze-all cycle, please notify your PCA of the cycle conversion as quickly as possible, as we will need to cancel or update the original authorization on file. This change will also impact your out-of-pocket financial responsibility. If you have any questions, please reach out to your dedicated PCA.

14. **What if my treatment is cancelled? Will it count toward my Smart Cycle balance?**

In rare cases, a treatment cycle will need to be cancelled prior to completion. The following cases may arise:

- Cycles cancelled prior to retrieval (or aspiration) will not be counted against your Smart Cycle balance but will be subject to financial responsibility as determined by your medical plan.
- Cycles cancelled after retrieval (or aspiration), 1/4 Smart Cycle will be deducted from your balance.
- Cycles cancelled after fertilization due to no embryos available for biopsy, freezing, or storage, 1/2 Smart Cycle will be deducted from your balance. Please note this partial cycle does not apply if your embryos are all aneuploid as all services in that case were rendered.
- Cycles converted to IUI or Timed Intercourse, 1/4 Smart Cycle will be deducted from your balance.

If you have further questions regarding cycle cancellation, contact your PCA.

15. **What if my doctor requests a test, medication, or service that is not covered under Progyny?**

If your doctor recommends a test, medication, or service that is not listed as a covered service under Progyny, please contact your dedicated PCA to confirm your coverage and discuss next steps. If the test, medication, or service is not covered under Progyny, you may be financially responsible.

For example, cholesterol, pap smear, HPV, and other tests that are not specific to fertility are not covered under Progyny but may be covered under your regular medical insurance.
16. Are there any exclusions I should be aware of?

Standard exclusions include home ovulation prediction kits, services and supplies furnished by an out-of-network provider, and treatments, including medication, considered experimental or non-standard by the American Society of Reproductive Medicine. All charges associated with services for a gestational carrier, including but not limited to fees for laboratory tests, are not covered.

If your doctor requests services that are not listed in this guide, please check with your PCA to confirm coverage. There are some services that do not fall under Progyny’s coverage; however, they may be provided through your medical plan.

- Surgical procedures, except for egg retrievals, are not covered by your Progyny benefit. Examples of non-covered surgical procedures include laparoscopies, myomectomies, and tubal ligation reversals. Please contact your medical plan to inquire about coverage for surgical procedures.

- Pregnancy monitoring is a maternity service and therefore should be provided by your medical insurance carrier. Your Progyny benefit covers your fertility treatment until your first positive pregnancy test. If your clinic is out of network with your medical insurance, Progyny may be able to cover early pregnancy ultrasounds at your fertility clinic. Please reach out to your PCA for more details.

Costs will otherwise be your responsibility. Please check with your medical plan to confirm coverage.

17. What if I want to pay out-of-pocket for a service to save my Smart Cycle balance?

You have the option to opt out of the use of your Smart Cycle benefit and pay out-of-pocket for a service in order to save your Smart Cycle balance. Please contact your PCA if you are planning to pay out-of-pocket for a service, as your PCA will work with your provider to arrange payment. You cannot retroactively request that authorizations be cancelled either to self-pay for services and conserve Smart Cycles, or if the services do not deduct any Smart Cycles. Please be sure to check your email and alert us immediately if your clinic requests an authorization for a service for which you wish to self-pay. In most cases, self-payment for treatment also means self-payment for medication. Once a claim is in process for medication and treatment, we are not able to cancel the authorization.

18. Does the Progyny benefit include coverage for remote monitoring?

When choosing a clinic, it’s important to select a fertility clinic that will both meet your personal needs and be easily accessible as your treatment will include numerous visits to your clinic for testing such as blood work and ultrasounds. These tests are designed to ensure you are responding to the medication prescribed by your doctor. All services, including monitoring, are authorized at your primary clinic and typically cannot be covered if performed at outside clinics or labs. If you should choose to pursue these services outside of your primary clinic, this is referred to as remote monitoring (or outside monitoring) and it is not covered by your benefit. The tests will have an out-of-pocket expense.

19. What happens when I’ve exhausted my benefit?

When you have used your full Smart Cycle allowance, your lifetime benefits are considered exhausted. Initial consultations and other services can no longer be accessed, with the exception of any remaining storage
renewals as determined by your plan. However, you will continue to have ongoing access to your dedicated PCA as long as you remain an employee under an eligible plan. Progyny can continue to provide assistance by coordinating care as you move forward with your family building journey. If you would like to continue treatment, your PCA will help coordinate your appointments, speak to schedulers, labs, and clinics on your behalf, as well as continue to provide emotional support and guidance throughout your family building journey. Once your Smart Cycle benefit has been exhausted, treatment costs will be incurred as an out-of-pocket cost to you.

20. Does the Progyny benefit include coverage if I want to be a donor or surrogate?

Your Progyny benefit does not cover services for you to act as a donor or gestational surrogate for another person. Donors are those donating their eggs, sperm, or embryos to another person or couple. They are not the intended parent, not an intimate partner, and not carrying the pregnancy. Gestational carriers or surrogates are also not an intimate partner and not the intended parent. Your Progyny benefit is for your own family-building journey and does not cover services for others’ treatment.

21. When do I stop using Progyny and start using my pregnancy coverage?

Your Progyny benefit includes coverage through your first positive pregnancy test. However, your reproductive endocrinologist may not refer you to your OB-GYN until week eight of your pregnancy. Pregnancy monitoring after that time should be billed as medical to your medical plan. However, if your Progyny clinic is out of network with your medical plan, pregnancy monitoring can be authorized and covered by your Progyny benefit.

22. Does Progyny have male identifying or gender non-binary Patient Care Advocates?

Progyny understands the importance of having diverse perspectives available for our members, and that some members may prefer to work with advocates with a shared gender identity given the sensitive nature of fertility treatment. If you would like to request a male, transgender, and/or non-binary PCA, please make this known during your onboarding call or any time when speaking with your PCA.

23. What is the difference between a Reproductive Endocrinologist (REI) and a Reproductive Urologist (RU), and how do I know which is right for me?

A reproductive endocrinologist (REI) is a fertility doctor who primarily focuses on female reproductive health and fertility to achieve a patient’s family building goals. A reproductive urologist (RU) is specialized in male reproductive health and supports male-factor infertility treatments to help an individual or a couple improve their fertility outcomes. Most patients begin their journey with a REI for an initial consultation and to undergo diagnostic testing so they are better able to understand their family building options. After this step, they may be referred to a reproductive urologist if additional testing is required.
Eligibility

24. Who is eligible for the Progyny benefit?
   Faculty and Managerial & Professional staff who are Aetna members or Union staff enrolled in the Aetna Smart Care plan and their dependents.

25. Is the Progyny Smart Cycle benefit per member or per family?
   The lifetime Smart Cycle benefit is per family not per member.

26. Is fertility preservation covered in instances where fertility may be impacted by medical treatment or cancer, or in cases of gender dysphoria?
   In the event of medical treatment or cancer that may affect future fertility or in cases of gender dysphoria, fertility preservation is covered for members, partners, and dependent children under 26. Please reach out to your PCA for more information.

27. What if my partner is not a claimed dependent on my plan?
   If you are the primary subscriber and your partner is not a claimed dependent on your primary medical insurance plan, your partner’s services, including testing and treatment, will not be covered. Your partner must be a claimed dependent on your plan in order to receive coverage under your Progyny benefit.

28. What is primary and secondary insurance?
   A primary insurance is the plan that is billed first for medical services and the secondary insurance is billed for the remaining cost.

29. How do I know if Progyny is my primary insurance for fertility coverage?
   If your employer-sponsored medical plan is your primary medical plan, then Progyny is likely your primary insurance for fertility. If you have another medical plan as your primary, Progyny may be your secondary insurance for fertility coverage. Contact your PCA to confirm.

30. What happens when one partner has the Progyny benefit and one partner has fertility coverage through another carrier?
   If you and/or your partner have medical coverage through more than one insurer (i.e., covered under two different employers), it is imperative that you reach out to a Progyny PCA to understand how the coordination of benefits applies before you receive treatment.

   Your indication of primary insurance coverage for medical benefits will be used in Progyny’s treatment authorization process. If your indication of primary coverage is not correct it may lead to significant billing issues and financial responsibility on your part. If you’re not sure of your coverage details, please reach out to your medical carrier to confirm your coverage. You can then discuss this information with your PCA.
If you do not have fertility coverage under your primary medical insurance and are a dependent on the Progyny benefit, you must receive services from a Progyny in-network provider for your services to be covered under Progyny. Your PCA can help you select an in-network provider. All claims for fertility treatment for the person receiving services must be submitted to the primary insurance first (even though it will be denied). You must submit your Explanation of Benefits (EOB) from your primary insurance (which shows that the services were denied due to no coverage) to your PCA. Progyny will then work with your provider to process the claim successfully, subject to the specific coverage details of your Progyny benefit. Please note that denial reasons such as “denied due to being out of network with your primary plan” or “denied due to missing authorization request” are not eligible reasons to coordinate coverage under your Progyny plan. Members must adhere to the primary insurance’s rules and regulations.

If you have fertility coverage under your primary medical insurance and are a dependent on the Progyny benefit, you can submit the EOB from your primary insurance, which details your out-of-pocket responsibility, to Progyny for reimbursement until your primary insurance coverage is exhausted. Your reimbursement will be deducted from your Smart Cycle balance, subject to your member responsibility under your fertility benefit with Progyny, as applicable. Your PCA can provide you with more detail on how your reimbursement will impact your Smart Cycle balance. After your primary insurance coverage is exhausted, you must receive any additional fertility services from a Progyny in-network provider for those services to be covered under Progyny. Your PCA can help you select an in-network provider. Even though your primary insurance coverage has been exhausted, all claims for fertility treatment for the person receiving services must still be submitted to the primary insurance first. You will then receive an EOB from your primary insurance (which will show that the services were denied) and you must submit this to your PCA. Progyny will then process the claim, subject to the specific coverage details of your Progyny benefit. Note, deductible and coinsurance payments from your medical plan are not reimbursable expenses. Reimbursements must be submitted within three months of date of service.

If Progyny is included in your primary medical insurance and you are a dependent on another plan that has fertility coverage, you may be able to submit your EOB from Progyny, which details your out-of-pocket responsibility, to your secondary coverage carrier for reimbursement. Please contact your secondary insurance carrier with any questions.

31. What happens when both partners have the Progyny benefit through separate employers? The person receiving services must be a covered employee on their employer’s Progyny benefit (primary) as well as a covered dependent on their partner’s Progyny benefit (secondary) in order to access coverage on both plans. Services will be processed through the patient’s primary Progyny benefit until it is exhausted. Prior to the benefit being exhausted, you may request that any out-of-pocket responsibility be deducted from your secondary Smart Cycle balance, subject to your member responsibility, as applicable. Your PCA can provide you with more detail on how this will impact your secondary Smart Cycle balance. Once your primary Progyny benefit is exhausted, your remaining Smart Cycle balance under your secondary Progyny benefit will then be utilized for coverage of services.
32. How many Smart Cycles do I get if my partner and I are both employed at the same company?
Your Progyny benefit is per family, even if each member is enrolled separately on an eligible plan. If you and your partner are both employed at the same company, your Progyny benefit does not double.

33. How long does my Progyny coverage last?
Your Progyny Smart Cycle coverage lasts as long as you have a Smart Cycle balance available and are enrolled in a qualifying medical plan through your employer, or you elect COBRA upon leaving your employer. Should you leave your employer and not elect COBRA, your Progyny Smart Cycle coverage will expire on the date your medical plan is terminated. If you receive an authorization but coverage lapses before you receive services, your claim will be denied and you will be financially responsible. Please speak to your PCA if you have any coverage changes.

34. Does my Progyny coverage still apply if I leave Yale University?
If you receive treatment after you have left Yale University, you must enroll in COBRA. The process of enrolling in COBRA may take time. Please contact your HR department directly for more information regarding your specific COBRA coverage options. Please advise your PCA of any coverage changes. You forgo any remaining Progyny benefits if you choose not to enroll in COBRA and are subsequently responsible for any further treatment expenses.

Provider and Lab Facility

35. How do I schedule an appointment?
When you’re ready to schedule an initial consultation, please notify your dedicated PCA. Your PCA will send a referral with your Progyny member ID and contact information to the clinic. The clinic will then reach out to you directly to schedule a consultation. If you are an existing patient at a Progyny in-network clinic, you can schedule directly with the clinic. You must notify your PCA of all new appointments to ensure an authorization is processed in a timely manner.

36. What is an authorization and why do I need it?
An authorization is a document that confirms your coverage. Progyny sends the authorization to your clinic, which allows the clinic to bill Progyny directly. Prior authorization is the best way to prevent errors or delays in treatment. Please note, retro authorizations are not possible in all cases and must fall within timely filing for your underlying medical plan. Please contact your dedicated PCA to request an authorization before your first appointment and before you begin any treatment cycle.

37. How do I prepare for my initial consultation appointment?
Before your appointment:

- Speak to a Progyny Clinical Educator to learn more about what you can expect at your appointment.
• Make a list of questions you want to ask your doctor. You can always include a partner or loved one to help you process the information you receive.

• Print your Progyny Confirmation Statement so that you can provide a copy to your clinic and to any diagnostic testing facility, if needed. In-network labs are listed on your Confirmation Statement; please provide them a copy of your confirmation in lieu of your medical insurance card.

• Request any relevant medical records from previous clinics/appointments and bring these with you to your appointment. If you have any questions on how to initiate this, your PCA will be happy to guide you through the process.

• Arrive early to fill out any paperwork or visit the clinic website to see if there’s paperwork you can print and fill out prior to your appointment.

At your appointment:

• Please ensure the clinic has Progyny listed as your primary insurance, including your Progyny member ID number.

• You will also be asked for your primary insurance card for procedures not managed by Progyny (e.g., certain blood tests, pregnancy monitoring, and surgeries such as laparoscopies and other non-covered services).

• In addition to meeting with the doctor, you should expect to have blood work and an ultrasound performed. As a reminder, your authorization for your initial consultation and all standard of care fertility-related diagnostic testing is valid for 90 days. Authorizations cannot be extended. Any testing performed outside the 90-day authorization window will be an out-of-pocket expense.

38. How do I prepare for my treatment cycle appointment?

Before your appointment:

• Notify your PCA about the first day of your upcoming treatment cycle to ensure an authorization is in place prior to starting treatment.

• Print your Progyny Confirmation Statement so you can provide a copy to your clinic and to any in-network preimplantation genetic testing facility, if needed. In-network labs for preimplantation genetic testing are listed on your Confirmation Statement. Please provide the lab with a copy of your Progyny Confirmation Statement. There is no need for payment at this time since your member responsibility will be calculated after the lab has submitted the claim to Progyny.

When you arrive:

• Please ensure the clinic has Progyny listed as the primary insurance, including your Progyny member ID number.

• Typically, you can expect to have blood work and an ultrasound performed at every appointment during in-cycle monitoring. Please note that this protocol may vary depending on the treatment plan.
As a reminder, your authorization for your treatment cycle and standard of care fertility-related testing is valid for 60 days.

39. How can I check if my provider is in-network?
   You can search for reproductive endocrinologists, reproductive urologists, and clinics at progyny.com/find-a-provider or contact your dedicated PCA.

40. What do I do if the nearest in-network provider is more than 60 miles from my location?
   Please contact your PCA to discuss options and next steps.

41. How do I transition to an in-network Progyny provider?
   After you've reviewed Progyny's in-network list and selected a new clinic, please notify your dedicated PCA. Your PCA will send the clinic a referral including your Progyny member ID and contact information. The clinic will then reach out to you to schedule your initial consultation. Once you've scheduled an appointment, your PCA can walk you through the process of transferring your medical records to your new clinic.

42. How do I transfer tissue from an out-of-network clinic to an in-network clinic?
   Transporting tissue between clinics requires precise timing. You will need to coordinate with both clinics simultaneously and likely a third-party transfer company. Please contact your PCA for more information on how to get started.

43. Which labs are in-network for PGT-A or PGT-M testing?
   Please refer to progyny.com/labs for our growing list of in-network labs for PGT-A and PGT-M testing.

Medication

44. What is Progyny Rx?
   Progyny Rx is an integrated fertility medication program designed to work seamlessly with your Progyny benefit. Progyny Rx will supply your fertility medication throughout your fertility treatment.

45. What are the benefits of Progyny Rx?
   Progyny Rx offers several advantages over typical medication providers:
   
   • Progyny Rx works seamlessly with your fertility benefit, requiring a single authorization for both your fertility treatment and your related medications.
   
   • Next day medication delivery ensures that you receive your medication when you need it. Same day medication delivery is available, if necessary.
• A pharmacy clinician is available 7 days a week to review your medication and administration as well as offer training and support for every medication delivery.

• Pharmacy clinicians are available by phone to answer any questions you have about your fertility medication.

• Information about medications and your fertility treatment plan will be seamlessly coordinated between Progyny Rx and your PCA.

46. How does Progyny Rx work?

Progyny Rx works by authorizing medications at the same time as your treatment:

1. Once the authorization is processed, your doctor will send your prescription(s) to our pharmacy fulfillment partner for Progyny Rx.

2. Before your medications can be shipped, a Progyny Rx specialist from our pharmacy partner will call you to complete a consultation call. On this call, you will confirm your preferred shipping address, schedule your delivery date, discuss any allergies and health conditions, review waste management protocols and how medication is dispensed, and ask any questions you may have about your medication shipment. You will also receive a verbal explanation of financial responsibility for Progyny Rx-covered medications (fertility medication) versus medications covered by your pharmacy benefit manager (PBM) (ancillary medication). You will pay a copayment for any ancillary medications over the phone via credit card.

3. Once your medication is fulfilled, your fertility medication is submitted as a claim to your medical carrier. Once processed, you will receive an invoice from Progyny for any out-of-pocket responsibility according to your medical carrier.

4. The pharmacy will fill your prescriptions and deliver to your preferred address on the day required for your treatment. You will receive your fertility medications and ancillary medications in the same shipment.

5. Once you have your medications, a Progyny Rx specialist from our pharmacy partner will be available to walk you through your medications and how to properly store and administer them.

47. Where is the Progyny Rx pharmacy?

The Progyny Rx network includes fertility specialty pharmacies throughout the United States that provide mail order services to anywhere in the U.S. with clinical and order support 7 days a week. Your Progyny Rx in-network pharmacy will be indicated on the bottom left-hand corner of the Patient Confirmation Statement that authorizes your treatment. The Progyny Rx in-network pharmacy is determined by your provider’s geographical location.

48. What medications are covered under Progyny Rx?

Please refer to the medications covered under Progyny Rx in the Progyny Rx Formulary section.

Note: While ancillary medications (such as antibiotics) may be included in your fertility medication shipment, ancillary medications are not covered by Progyny Rx. Coverage for these medications falls under your
pharmacy benefit manager (PBM). You will pay any applicable fees (copayment, coinsurance, and/or deductible) directly to the pharmacy during your consultation call.

49. How do I get my medication for treatment?

Prescriptions for your fertility treatment must be sent by your provider to the pharmacy indicated on your Patient Confirmation Statement. Once the prescription is received by our pharmacy partner, a Progyny Rx specialist will reach out to you to schedule the delivery. Medications are sent overnight.

50. Why am I receiving multiple shipments of medication instead of receiving it all at once?

Progyny Rx will provide the quantity of fertility medication that is required for your treatment. However, your combination and dosage of medications may change throughout the course of your treatment. In order to minimize waste and ensure that you are only paying for the medication you need, Progyny Rx will deliver your medication in multiple shipments. The Progyny Rx in-network pharmacy will schedule a follow up call with you prior to your last day of fertility medication supply to check-in and determine if the refill is required. If your dosage increases mid-cycle, your provider should inform Progyny of this change, but just to ensure we are aware, please contact your Progyny Rx in-network pharmacy immediately. The Progyny Rx in-network pharmacy can provide next day delivery, same day delivery, or local pharmacy pick up when necessary to ensure you receive your medication when you need it for treatment.

51. How do I store my medications when I receive my shipment?

Some fertility medications require refrigeration. Medication(s) that require refrigeration will be marked with a blue border and snowflake icon on your Progyny Rx placemat. Other medications may have additional storage requirements that will be discussed during your UnPack It Call with your pharmacy clinician. Please call the Progyny Rx in-network pharmacy and conduct your Unpack It Call after your package arrives by calling the number on your Progyny Rx Placemat. A pharmacy clinician will walk you through your shipment and explain how to properly administer and store the medication during your UnPack It Call. The UnPack It Call is available 7 days a week.

52. How do I administer my medications?

You will have a call with a Progyny Rx specialist after you receive your medication shipment. Together, you will review each medication’s usage and dosage. You also have access to a pharmacy clinician for any questions you may have after your call. Additionally, you can view Progyny Rx video tutorials on medication administration at progyny.com/rx.

53. How do cancelled treatments impact my prescription?

It is important to notify your dedicated PCA about a cancelled treatment to ensure additional medication is not shipped to you. If Progyny is not aware that your treatment is cancelled, additional packages may be shipped to you and your medical carrier will be billed. Progyny will send you an invoice reflecting any member financial responsibility, which may include deductible, coinsurance, copayment, and/or out-of-pocket maximum, depending on your plan.
54. What if my doctor orders medications not on the formulary?

Progyny only covers specialty fertility medications that are on the formulary. Any prescribed medication that is not on the formulary will be substituted for the alternative covered by Progyny. Compounds that consist of the medication on the formulary are covered by Progyny. All ancillary medications, such as antibiotics, are not covered by Progyny but are typically covered by your primary pharmacy benefit manager (PBM). These are subject to financial responsibility, which may include deductible, coinsurance, copayment, and/or out-of-pocket maximum depending on your medical plan.

Billing and Claims

55. What is an authorization and why do I need it?

Progyny sends an authorization (Patient Confirmation Statement) to your clinic confirming your coverage, which allows the clinic to bill Progyny directly. Prior authorization is the best way to prevent errors or delays in treatment. Please contact your dedicated PCA to request an authorization before your first appointment and before you begin any treatment cycle.

56. Why am I receiving a bill?

You are subject to financial responsibility even with Progyny coverage and you should expect out-of-pocket expenses for services rendered. Your individual costs will be determined by several factors, including: the plan that you enrolled in and its financial responsibility, your treatment plan, and the center directing your care.

Your clinic will bill Progyny directly throughout your treatment. Progyny will process claims through your primary medical carrier and apply member responsibility to these paid services. You will receive an invoice from Progyny that indicates your portion of the financial responsibility, which you can pay via check or credit card. If you believe that you have received a bill in error, please contact your PCA.

To learn more about your financial responsibility visit the Understanding Your Financial Responsibility section or contact your PCA.

57. What if I utilize a service that requires reimbursement?

In some cases, Progyny reimburses members for covered medical services. To ensure eligibility, reimbursements must be discussed with your dedicated PCA in advance. You will need to save all invoices and proof-of-payments. When you’re ready to initiate your reimbursement, please contact your PCA. Reimbursements must be submitted to Progyny within three months of date of service to comply with timely filing rules. Your PCA will send you a DocuSign to complete and you will attach all relevant documents prior to submitting your reimbursement request for processing. Your reimbursement will be the cost of service minus your financial responsibility. Not all services are eligible for reimbursement, please check with your PCA on your specific case. Please note, reimbursements may take up to 90 days to process. If your expenses are related to adoption or surrogacy, please contact your PCA.
58. How can I pay my invoice?

You will receive an invoice via email with instructions to pay the invoice directly online. You can also pay your invoice in the member portal, by visiting [progyny.com/payment], or you can pay over the phone by speaking to a Progyny billing specialist. Payments can be made via check, by ACH, or credit card.
Appendix
Initial Consultation and Diagnostic Testing

Below is the list of authorized tests and associated codes that may be ordered by your doctor during your initial consultation(s). The bolded tests below are standard protocol for your reproductive endocrinologist to order prior to undergoing any fertility treatment. The other tests listed are also covered by Progyny and may be ordered by your doctor. Please note that your covered initial consultation and diagnostic testing may be billed across several invoices.

† Mock cycles, and endometrial biopsies are covered with medical necessity and endometrial receptivity testing is covered at in-network labs only. Sometimes these cycles are referred to as endometrial receptivity cycles where the tissue biopsied is covered at an in-network lab (examples are Cooper's ER Peak, Igenomix's ERA,). Please note Emma/Alice tests are not covered. Please contact your PCA for more details.

‡ Surgical hysteroscopies performed with anesthesia in the fertility clinic may be billed to medical. If they are not covered by your medical plan or if your clinic is out of network with your medical insurance, Progyny can cover them as a reimbursement. Reimbursements must be submitted within three months of date of service.
*Pre-conception carrier screening (genetic tests) includes: RBC sickle cell test; Horizon panels; FANCC, gene analysis; G6PC, gene analysis; GBA, gene analysis; HBA1/HBA2, gene analysis; IKBKAP, gene analysis; MCOLN1, gene analysis; SMPD1, gene analysis; CFTR gene com variants; CFTR gene full sequence; CFTR intron 8 POLY (T) analysis; FMR1 gene detection; FMR1 gene characterization; HEXA gene, Tay Sachs enzyme.

The fertility medications below are covered under the Progyny Rx pharmacy benefit. Progyny Rx coverage includes compounds of the raw ingredients of the formulary medications below. If you have any questions about the medications listed, please ask your medical provider. Ancillary medications, such as antibiotics, are not covered by Progyny Rx, but are typically covered by your primary pharmacy benefit manager (PBM), subject to all financial responsibility. Please contact your PCA with any questions regarding coverage of ancillary medications. Ancillary medications may be filled by our pharmacy partner and delivered to you with your fertility medication(s).
